## SUMMARY

I've been a developer since 1998 and a full stack web developer since 2004, I have 19 years of experience, as a Functional Analyst but also as a developer with PHP (19+ yrs.), Javascript (19+ yrs.), NodeJS (4+ yrs.), VueJS (5+ yrs.), ReactJS (2+ yrs.), I have a college degree in System Analysis.

I have worked in many industries and many different companies with its peculiarities, I'm an active listener so I can offer the best solution for your needs and objectives.

I truly love development. I get excited every time my favorite languages and tools release a new feature. I love to learn new things, so sometimes I go on and on talking about development all day with my dev friends.

In 2012 I co-founded a startup called aluGuest (it was operative until 2017), a platform for temporary accommodation rental. I built the architecture for aluGuest from zero. I was able to gather a small but solid team for both web development and design to solve our needs, at the time, ReactJS, VueJS or even Node did not exist yet, or they were in very early stages (beta versions or prior), so I built a solid platform using jQuery, PHP, MySQL and MongoDB, the platform was very fast and bullet proof, to process credit cards and handle money, we didn't have any security breached and the code built was very robust.

Later in 2017 I learned VueJS. I become part of several projects using it. I participated in a very large VueJS project for the Argentina government (a Transportation Agency), and other private held companies' projects in the most diverse applications, I also rebuild my ex partner's (from aluGuest) company's ecommerce platform (a small temp apartment rental agency in Buenos Aires) Welcome2BA, using NuxtJS (a VueJS framework) and PHP 7.

In the latest years I worked with ReactJS, NextJS and some minor VueJS projects. I also worked in backend creating APIs and batch applications in NodeJS and PHP.

I have more to share, so I hope we can meet soon.

## WORK EXPERIENCE

---

### **Pest Share – Full Stack Developer**

November 2021 – January 2023: 1 year, 2 months

Directly: [pestshare.com](https://pestshare.com)

**Techs:** NextJS, ReactJS, PHP 7.4, PHP 8.2, CodeIgniter, Laravel, Docker, MySQL Server (AWS RDS), AWS (S3 and EC2).

As the main developer of the "Claim Management" project, I was able to convince the leaders to change the project tech stack from JQuery as initially they requested to a ReactJS version, particularly a NextJS version. I also introduced Laravel along with a backend team member for the API, and at the same time I kept the legacy code working as needed.

This project allows a customer to request a pest control service and, at the same time, allows Pest Share operations team to handle such service improving the current manual process.

In my time in Pest Share I've:

- Created the integration code to submit a pest control request from any web page.
- Move part of the project to ReactJS and into a new way of doing software.
- Fixed bugs in the legacy code.
- Integrated the legacy code with the new ReactJS code.
- Solved various DB issues in the legacy code.
- Solved the database synchronization between old and new tables.

Pest Share is a startup company their goal is to "Remove the confusion and frustration around property manager pest control. Residents report pest problems and local service providers take care of the rest."

### **Mahisoff – Full Stack Developer**

November 2021 – January 2023: 1 year, 2 months

Customer: [BidMyListing.com](https://bidmylisting.com)

**Techs:** ReactJS, Jest, NodeJS, MongoDB.

I was with the team since started, prior the production version, building the foundation of the first versions of the platform and always improving ever since. As part of the team, I had to implement the features requested by the business, working mainly on the frontend, but from time to time in the backend as well to complement the backend team.

BidMyListing is startup company, focused on real estate as a marketplace platform that allows homeowners to choose the best real estate agents in their area who will pay them upfront to list their home.

We were a dynamic team of very skilled developers, who keep you learning all the time, pushing to the best of your ability, I was very happy to be part of it!

## WORK EXPERIENCE

---

### **Willdom – Full Stack Developer**

*March 2021 – November 2021: 9 months*

Customer: **LaCure Villas (lacurevillas.com)**

My objective in LaCure Villas was to stabilize the legacy system, which have been suffering bugs, issues, and crashes, being the main goal that the business may continue to work. After such stabilization, the idea was to start designing and developing a new system.

The new system should be handling the calendar synchronization across different providers and connect to several external providers' API's, at the same time, improve the response time and reduce the downtime of the internal process, providing, in the future, the possibility to offer online payments, connection with the ERP, and the CRM and a lot of new features that the business needed.

LaCure Villas is a luxury temporary rental agency for the more exclusive and demanding customers. We were a small team of 3 developers and a manager.

**Techs:** NodeJS, VueJS, PHP, PostgreSQL, MongoDB.

### **Wortise – Lead Developer**

*May 2020 – Jan 2021: 9 months*

In Wortise, which is a very young company with a dynamic spirit, I work in the development area, carrying out analysis, participating a lot, contributing my grain of sand and sharing with great minds a job that fills me a lot, I feel a belonging that I do not I felt before and the team's push allows me and asks me to give my best.

I carry out internal business support software development, changes within the Ad Server core and completely innovative, ambitious and disruptive projects.

**Techs:** NodeJS, VueJS, PHP, PostgreSQL, MongoDB.

**Databases:** MongoDB, MySQL, PostgreSQL, Elastic Search, Big Query.

### **Global Innovation – Developer and founder**

*Feb. 2017 – May 2020: 3 years and 4 months*

This is my personal brand as developer.

In my daily dealings with clients, I make custom requirements, and estimate project scope for trade budget, scope, negotiate the dates of payments and deliverables for each milestone.

Once approved the budget, I make a deeper analysis, which is discussed later with the client, making the necessary adjustments before the technical and functional design. In general, the projects are focused on web environments and web services depending on needs.

**Techs:** NodeJS, VueJS, PHP, C#, PostgreSQL, MongoDB, MySQL, Oracle, SQL Server.

## WORK EXPERIENCE

---

### **Global Innovation - Senior Lead Software Engineer**

Feb. 2017 - Jan. 2019: 2 years

Customers: BAires Apartments and Welcome2BA

BAires Apartments partnered with Welcome2BA in order to become more profitable and, together be, the biggest player on Temporary Rentals in Buenos Aires.

My main goal: migration of systems, process integration, change the process and systems smoothly in order to do what each one does better and improve the others.

Integration with third parties' software, like ZenDesk, Slack, Zoho CRM, Cliengo, aluPays.

My main goal: migration of systems, process integration, smoothly changes in the process and systems to do what each do better and improve each other processes and systems.

**Techs:** PHP 5.6 and 7, CodeIgniter, CakePHP, jQuery, Javascript, SQL Server, MariaDB, NuxtJS (VueJS), MongoDB.

### **aluGuest.com – Founder, CTO and Senior Developer**

Apr. 2012 – Jan. 2017: 4 years and 10 months

aluGuest.com was a platform for temporary accommodation rental focused on the Latin American market.

We have integrations with large credit card processing providers like Braintree and PayPal and we had to create our own credit card processing company with its own API and integration, we called it aluPays.

It was a big challenge to create everything from zero and it was one of the greatest moments in my carrier, I've led a team of designers, developers, I also oversee operations, and managed budgets.

**Techs:** PHP 5.6, PHP 7, CodeIgniter, CakePHP, jQuery, Javascript, MariaDB, MongoDB, ReactJS 1.
