SUMMARY

Experienced Full Stack Developer Architecting Scalable Solutions

With over **20 years** of experience in software development, I have built and led innovative web applications across multiple industries, including **e-commerce, real estate, telecommunications, and temporary accommodation rental**. My expertise spans **frontend and backend development**, software architecture, and leadership roles such as team lead, project manager, and founder.

I specialize in **PHP, NodeJS, ReactJS, NextJS, VueJS, NuxtJS**, and database management with **MySQL, PostgreSQL, MongoDB, MariaDB, SQL Server, and Oracle**. I also have **deep expertise** in cloud computing (**AWS, Docker**) and system scalability.

Holding a **college degree in System Analysis**, I thrive in **fast-paced environments**, solving complex technical challenges, optimizing performance, and mentoring teams to deliver high-impact solutions.

EDUCATION

Systems Analyst - UTN - National Technology University

From: 1997 - 2005

Buenos Aires, Argentina

TECHNOLOGIES

AWS, Docker, Javascript, Typescript, NodeJS, ReactJS, NextJS, VueJS, NuxtJS, CSS, HTML5, PHP, Laravel, CodeIgniter, MongoDB, MariaDB, MySQL, SQL Server, PostgreSQL, Oracle

WORK EXPERIENCE

Freelance - Full Stack Developer

From: May 2025 - To: Present
Technologies Used: Typescript, ReactJS, NextJS, VueJS, PHP, NodeJS, Laravel, Docker

As a freelance developer, I work with other developer, as a team, we have several clients and I work in different projects.

The main technologies that we work with are: Typescript, ReactJS, VueJS, NextJS PHP and NodeJS.

In the last months we improved our processes and the way we do software by using AI as an Agent.

Command|Link - USA - Full Stack Senior Web Developer

From: May 2024 - To: May 2025: 1 year
Technologies Used: Typescript, ReactJS, PHP 8.X, Yii, Laravel, Docker, MySQL Server (Azure Max Scale), MS SQL Server (Azure).

As a Full Stack Senior Web Developer I:

- Collaborated in the development of complex React applications using TypeScript, leveraging advanced type features (generics, interfaces, type guards) to ensure robust, maintainable, and scalable code.
- Developed new internal APIs from scratch using Laravel.
- Connected to different DB vendors like MySQL and SQL Server
- Connected with third party APIs to consume information, following the best practices.
- Participated in the architecture definitions and proposed ideas for change and improvement.
- Worked alongside QA to bring quality and velocity when new features are ready to be tested.
- Work well in messy legacy environments with little or no documentation.

Globant - Argentina | Kingdom of Saudi Arabia - Senior Web UI Developer

From: January 2024 - To: May 2024: 5 months
Technologies Used: Shopify, Liquid, Vanilla Javascript, HTML, jQuery, CSS.

As a Senior Web UI Developer I resolved a lot of performance issues and development issues.

- Improved page load time from 16s to 1.5s, boosting conversion rates.
- Share knowledge of how to develop vanilla javascript with performance in mind.
- Teach others to follow performance guidelines.
- Participated as keynote speaker in a Javascript development seminar about performance improvements for young female developers.

Pest Share - USA - Full Stack Developer

From: March 2023 - To: September 2023: 6 months
Technologies Used: NextJS, ReactJS, PHP 7.4, PHP 8.2, CodeIgniter, Laravel, Docker, MySQL Server (AWS RDS), AWS (S3 and EC2).

As the main developer of the "Claim Management" project, I was able to convince the leaders to change the project tech stack from JQuery as initially was requested to a ReactJS version, particularly a NextJS version.

I also introduced Laravel along with a backend team member for the API, and at the same time keep the legacy code working as needed.

This project allows a customer to request a pest control service and, at the same time, to the Pest Share operations team handle such service removing the current manual process.

In my time in Pest Share I've:

- Created the integration code to submit a pest control request from any web page.
- Move part of the project to ReactJS and into a new way of doing software.
- Fixed bugs in the legacy code.
- Integrated the legacy code with the new ReactJS code.
- Solved various DB issues in the legacy code.
- Solved the database synchronization between old and new tables.

Pest Share is a startup company their goal is to "Remove the confusion and frustration around property manager pest control. Residents report pest problems and local service providers take care of the rest.".

Mahisoft - USA - Full Stack Developer

From: November 2021 - To: January 2023: 1 year, 2 months
Customer: BidMyListing.com
Technologies Used: Typescript, NodeJS, ReactJS, NextJS, Docker

As part of the team I had to implement the features requested by the business on the frontend side.

I was with the team since started, prior the production version, building the foundation of the first versions of the platform and always improving ever since.

BidMyListing is startup company, focused on real estate as a marketplace platform that allows homeowners to choose the best real estate agents in their area who will pay them upfront to list their home.

We were a dynamic team of very skilled developers, who keep you learning all the time, pushing to the best of your ability, I was very happy to be part of it!

Willdom - USA - Full Stack Developer

From: March 2021 - To: November 2021: 9 months
Customer: **LaCure Villas**
Technologies Used: NodeJS, VueJS, PHP, PostgreSQL, MongoDB.

My objective in LaCure Villas was to stabilize the old system, that have been suffering a lot of bug issues and crashes, so the business can still work and then start design and develop a new system.

The new system should be handling the calendar synchronization across different providers and connect to several external providers' API's and, at the same time, improve the response time and reduce the downtime of the internal process, providing, in the future, the possibility of online payments, connection with the ERP, and the CRM and a lot of new features that the business needed.

LaCure Villas is a luxury temporary rental agency for the more exclusive and demanding customers. We were a small team of 3 developers and a manager.

Wortise - Argentina / Uruguay - Lead Developer

From: May 2020 - To: January 2021: 9 months
Techs: NodeJS, VueJS, PHP, PostgreSQL, MongoDB.
Databases: MongoDB, MySQL, PostgreSQL, ElasticSearch, BigQuery.

In Wortise, which is a very young company with a dynamic spirit, I work in the development area, carrying out analysis, participating a lot, contributing my grain of sand and sharing with great minds a job that fills me a lot, I feel a belonging that I do not I felt before and the team's push allows me and asks me to give my best.

In particular, I carry out internal business support software development, changes within the AdServer core and also completely innovative, ambitious and disruptive projects.

Global Innovation - Argentina, USA, etc. - Developer and founder

From: February 2017 - To: May 2020: 3 years and 4 months
Techs: NodeJS, VueJS, PHP, C#.
Databases: PostgreSQL, MongoDB, MySQL, Oracle, SQL Server.

This is my personal brand as developer.

In my daily dealings with clients, I make custom requirements, and estimate project scope for trade budget, scope, negotiate the dates of payments and deliverables for each milestone.

Once approved the budget, I make a deeper analysis, which is discussed later with the client, making the necessary adjustments before the technical and functional design. In general, projects are focused on web environments and web services depending on needs.

Global Innovation - Senior Lead Software Engineer

From: February 2017 - To: January 2019: 2 years
Customers: Baires Apartments and Welcome2BA
Technologies Used: PHP 5.6 and 7, CodeIgniter, CakePHP, jQuery, Javascript, SQL Server, MariaDB, NuxtJS (VueJS), MongoDB.

BAires Apartments partnered with Welcome2BA in order to become more profitable and, together be, the biggest player on Temporary Rentals in Buenos Aires.

My main goal: migration of systems, process integration, change the process and systems smoothly in order to do what each one does better and improve the others.

Integration with third parties software, like ZenDesk, Slack, Zoho CRM, Cliengo, aluPays.

My main goal: migration of systems, process integration, smoothly changes in the process and systems to do what each do better and improve each other processes and systems.

aluGuest.com - Founder, CTO and Senior Developer

From: April 2012 - To: January 2017: 4 years and 10 months
Technologies Used: PHP 5.6, PHP 7, CodeIgniter, CakePHP, jQuery, Javascript, MariaDB, MongoDB, ReactJS 1.

aluGuest.com was a platform for temporary accomodation rental focused in the latinamerican market.

We have integrations with large credit card processing providers like Braintree and PayPal and we had to create are own credit card processing company with its own API and integration, we called it aluPays.

It was a big challenge create everything from zero and one of the greatest moments in my carrier, I've lead a team of designers, developers, I also overseed operations, and managed budgets.
